Series 4000 Aluminum Thermal Break Tilt Windows

Series 4000 Aluminum Thermal Break Tilt Window

Fully-Featured for your Benefit.

Energy savings, security, easy operation, low maintenance, elegant styling. All the options you want. All in one economical window: the Crystal thermal-break aluminum double-hung tilt.

CTD-4000

AAMA*101-97: H-C35, IGCC-CBA

Crystal proudly features **Intercept Insulating Glass**, which provides high energy-efficiency.

This unique "warm edge" design keeps your building comfortable while saving you money on heating and cooling costs. This means that when you choose Crystal, you'll feel the comfort-enhancing benefits of this warm-edge technology.

When you buy Crystal's fully-featured aluminum thermal break double hung-tilt, you'll reap the benefits of these *standard* features.

- **Full 7/8" double insulated glass**~ provides optimum insulation and sound-reducing qualities.
- **Tilt-in sashes**~ makes cleaning easy.
- **A built-in thermal barrier**~ part of every aluminum piece, prevents heat and cold conduction.
- **Full fin-sealed double weatherstripping**~ and hollow memory rubber. Seal all around the window sashes, preventing air infiltration.
- **Tilt-latch mechanisms**~ recessed below the surface for better appearance.
- **Baked acrylic enamel finishes**~ ensure windows are permanently white or bronze, and never need painting.
- **Vent locks**~ provide night ventilation by limiting opening.
- **Anti-Drift clip lock**~ which locks automatically when the top sash is at the upmost position to enhance safety and air tightness.

Optional features available on the Crystal Series 4000 Aluminum Thermal-Break Windows include.

- **Argon filled**~ a colorless inert gas used to replace air in an insulating glass unit, which decreases heat transfer significantly.
- **Low-E glass**~ substantially increases thermal window performance while maintaining the appearance of uncoated glass.
- **Between glass grids**~ enhances the beauty of the window.

PPG's Intercept® insulating glass spacers improve overall window efficiency.
